

The XMI[BML + DI] bridge provides the ability to export the information contained within BML business models to third-party modeling and integration platforms via the XML Metadata Interchange (XMI), version 1.0, and the XMI Diagram Interchange (DI). XMI is an Object Management Group (OMG) standard for exchanging metadata information via eXtensible Markup Language (XML). DI is a standard used to exchange the visual representation of models or diagrams.

XMI 1.0 [BML + DI]

The XMI for BML export is the standard way of exchanging eXtended Business Modeling Language (BML) information via XML. The XMI[BML] standard also includes the visual representation of the BML models via the Diagram Interchange. The XMI for BML and DI (XMI[BML + DI]) exports the data and visual representation of the WHAT, WHO, WHERE, WHICH, and HOW dimensions of BML.

The XMI[BML + DI] export is offered as an add-on to BML W5 and is a standalone license.
