

The BML XPDL import provides the ability to import the information contained within the XML Process Definition Language (XPDL) standard, version 2.0, to BML models. XPDL is a Workflow Management Coalition standard to interchange Business Process definitions between different workflow products like modeling tools and workflow engines. XPDL defines an XML schema for specifying the declarative part of the workflow.

### **BML XPDL Import**

The BML XPDL import translates the XPDL information into BML WHAT, WHO, and HOW models. Additional BML models, such as the WHICH, WHERE, and WHEN may be imported, depending on the completeness of the XPDL import. Import of these BML models requires customized extension of this interface.

The BML XPDL import is offered as an add-on to BML W5 and is a standalone license.
