

BML Microsoft® Project 2003 Export provides the ability to export information contained within BML WHO, WHAT, and HOW business models to Microsoft® Project 2003. The export shows the WHAT activities, including auto-number, as tasks within Microsoft® Project 2003.

Additionally, linked WHO objects, from the HOW model, will display as resources and linked WHAT activities, from the HOW model, will display as predecessors within Microsoft® Project 2003.

The export is generated based on the information sources- BML files and models- selected by the user and can be output in an eXtensible Markup Language (.xml) format. The BML Microsoft® Project 2003 Export is offered as an add-on to the BML Product Suite and is a standalone license.
