

BML W5SS leverages the latest technology to deliver a simple, yet powerful desktop business modeling application designed specifically for the business user. BML W5S allows users to interact directly with SAP® Solution Manager.

FOR SAP® MODELING

Unique to SAP® is the requirement to capture information about what is in SAP® and what is outside of SAP®. Models loaded from a SAP® Solution Manager Project or from the SAP® Business Process Repository contain information provided by SAP®. This information is stored in profiles. In order to upload models back into Solution Manager, the BML editor provides functionality to create WHAT activities that will be supported by SAP®. This is designated in a Profile. For WHAT activities supported by SAP®, SAP® transaction codes can be entered in a special profile. The BML editor provides functionality to create WHAT activities that will not be supported by SAP®. A special SAP® HOW model, created from SAP® WHAT activities, can be created to upload a piece of the model into Solution Manager. The complete WHAT model can also be loaded into Solution Manager. All SAP® profile data is loaded into a Solution Manager Project.

CONNECTING TO THE SAP® CONNECTOR

In order for the SAP® data to flow from SAP® Solution Manager Projects or SAP® Business Process Repository or from BML models back into Solution Manager, a connection from the model repository to the SAP® Connector is required. The W5SS modeler maps BusinessGenetics multiple levels to Solution Manger – Scenario, Process and Process Step. It transfers the model data to and from the SAP® Connector.

ADDITIONAL INFORMATION

Additional information about the W5S, including features and functionality, can be found in the corresponding W5 Software Product Description (SPD).

HARDWARE & SOFTWARE REQUIREMENTS

COMPONENT	REQUIRED SPECIFICATIONS
Processor	<ul style="list-style-type: none">▪ 1-gigahertz (GHz) Intel Pentium-class processor
